Made in USA

2014.3

Thanks to you.....

AXIS AIR GROUP, INC. manufactures a complete line of HVLP Paint Spray Systems and Supplied Air Respirators. Located in Northwest Illinois, all of our systems are produced in the USA since 1993.

Our product line began with the development of the HOBBAIR Supplied Air Respirator system. Our inventors were aviation and automotive enthusiasts who decided it was time to develop a product at a great price so they wouldn't have to hear of another friend falling ill while enjoying their hobby. Our fresh air respirator is unique in its exceptional quality and price. Our popularity has rapidly spread.

AXIS AIR GROUP, INC. credits you, our customers, with our complete product line of quality HVLP Sprayers and Respirators. Over the years you came to us with many excellent suggestions. We eagerly listened and developed the products you will enjoy in the following pages. Our products will give you the performance and confidence to achieve professional quality finishes.

Our respirators and paint sprayers are manufactured to fit your unique needs with the highest standards of quality.

We blend the dependability and quality you need with the nimbleness of USA made product. Every system is built with your individual needs in mind.

It is time to give us try – and remember that it is your feedback that has made us successful, so help us stay connected to you.

What You're Saying.....

Please See Page 18 for Testimonials

"Absolutely! You guys most definitely can use my letter in your testimonials!

Not sure what kind of sales you guys have or where your marketing efforts are targeted... But I have to tell you that I am sure you know, there are TONS of hobbyists (especially in the car restoration area) that are more and more inclined to paint their own cars. I think the turbine spray systems have been GREATLY under-marketed, and most people out there either don't know about them, or have very wrong information about them.

I belong to a very large internet forum for owners of second generation (70-81) Camaros, and you can imagine that's only a FRACTION of the collectible muscle cars out there. My hopes are to be able to post awesome before/after pictures, and when I am asked who did my car, to be able to say 'I did it myself'...which I am sure will be followed by 'what did you use...or how did you do it?' My hopes are to be able to educate more folks on the advantages of a turbine sprayer.

Your customer support is second to none, and I don't say that often! Nowadays, it seems that a lot of companies just want to sell you stuff, and forget all about your after the sale. I hope my sprayer lasts a long time, but when it goes, or whenever I need ANY supplies, I will go back to you guys and tell everyone that will listen!

Thank you again."

Fernando, Cibolo, TX

HOBBYAIR PRO AIR CITATION AXIS MARKSMAN

Manufactured by Axis Air Group, Inc. in Hampshire, Illinois USA

Why do I need A Supplied Air Respirator?

The simple answer to this question is because it is the most effective way to protect your lungs from exposure to dangerous elements that will drastically reduce or even prevent their ability to function.

Diseases such as silicosis, isocyanate poisoning, emphysema, and even cancer can be attributed to breathing air that is contaminated with toxic vapors and mists.

Polyurethane paint, for example, is formulated to produce a hard, shiny finish with the ability to last a long time. Isocyanates are produced as a by-product of catalysation. When isocyanate vapors are released from this paint and are allowed to enter our lungs and other parts of our body, they can harm them.

Always check the product label to see what kinds of protection the manufacturer recommends. You will find that you will feel better and extend your working time by wearing an Axis Air Group Fresh Air Respirator even while applying non-toxic substances or in an area with particulates in the air.

Won't a charcoal filtered facemask work just as well?

It depends on what type of contaminant you are exposing your lungs to and how frequently you are replacing the filters. When isocyanates are present, you need the assurance that only a supplied-air respirator will provide!

Once you start using the HOBBYAIR respirator system, you will find that there is no reason to substitute another type of respirator when you are working on any project that conflicts with your breathing of fresh air.

When you feel the cool fresh air flowing into your lungs provided by the HOBBYAIR system, we feel confident that you will agree with thousands of satisfied users that your purchase of a HOBBYAIR system will be one of the best investments that you've ever made!

The HOBBYAIR respirator system was designed to keep your lungs safe and healthy—
why take a chance with anything less?

Protect Your Lungs - You Only Get One Set!

HOBBYAIR FRESH AIR RESPIRATORS

COOL FRESH AIR TO BREATHE!

AXIS AIR GROUP, INC., is the only company who produces the patented Hobbyair and Pro Air Respirators and Citation combined HVLP Sprayer and Respirator system. Our unique method of delivering fresh air to your facemask lets you breathe cool, fresh air all day long!

You haven't tried anything like it before.

QUALITY.....

The HOBBYAIR's acceptance into the market is not just its unique design, but the quality of its component parts. During the development stage, every part of the HOBBYAIR system was scrutinized to be the very best available before it was added to the system! We never skimp on any components!

WHY SHOULD YOU CHOOSE A HOBBYAIR RESPIRATOR?

Filtered masks are expensive to properly maintain and require continuous attention. Today's paints are far superior, but also far more dangerous, than their predecessors. Fresh air is the only way to properly protect yourself in a variety of environments such as:

Painting	Leather & Vinyl Repair	
Woodworking	Wood Carving	Porcelain Refinishing
Welding	RV Model Building	Wood Turning
Cabinet-Making	Spray Foam Insulation	Spray-In Bedliners
	Leather Dye	Fiberglass Work

Building & Restoration of:

Airplanes	
Boats	
Cars	
Motorcycles	
Home Interiors	etc. etc. etc...

Cool Fresh Air to Breathe

for your

Occupation, Hobby and Project

Hobbyair 1

Shown with Full Facemask & 21040 Hose

Hobbyair 1 Supplied Air Respirator Specifications

The HOBBYAIR 1 comes with an air pump, 40' of hose, and a facemask or hood of your choice for one person. Locate the air pump in a fresh air location and breathe HEPA filtered, clean air, in virtually any contaminated breathing environment not immediately dangerous to life and health.

110-120V VAC, 50/60HZ
AMPS—1.6 amps, 8 cfm to facemask
Available in 240 volt

Hobbyair 2 Supplied Air Respirator Specifications

The HOBBYAIR II comes with a high output air pump, 80' of hose, and a facemask or hood of your choice for one person. Locate the air pump in a fresh air location and breathe HEPA filtered, clean air, in virtually any contaminated breathing environment not immediately dangerous to life and health.

110-120V VAC, 50/60HZ
AMPS—7.2, 7.5 cfm to facemask
Available in 240 volt

Hobbyair 2

Shown with Air Supplied Hood & 21041 Hoses

Hobbyair Buddy Respirator Specifications

The HOBBYAIR BUDDY SYSTEM comes with an air pump, 'Y Valve', 2-40' hoses, and two facemasks or hoods of your choice for two people. Locate the air pump in a fresh air location and breathe HEPA filtered, clean air in any contaminated breathing environment not immediately dangerous to life and health. This system can also be configured for one person with one mask.

110-120V VAC, 50/60HZ 7.2 Amps. 6.5 cfm
to facemask
Available in 240 Volt

Hobbyair Buddy System

Shown with Half Facemasks & 21041 Hose

Hobbyair 120, 160 and 200

Hobbyair 120 shown with Full Facemask

You can choose a Hobbyair with 40, 80, 120, or 160 feet of hose.

Systems are built with an air pump which will support each hose length. In many cases, it is not possible to add hose lengths, as this will reduce air flow to the mask. **Be sure to measure your work area** so you can choose the proper hose length.

Choose a system which will enable you to locate the air pump in a fresh air location only.

Run your hose length/s from the air pump to your work location and don facemask or hood.

Choose a half facemask, full facemask or hood option.

I need to breathe fresh air while I work

I need eye protection

I need more than 40' of hose to locate my air pump in fresh air

I need more than 80' of hose to locate my air pump in fresh air

I need both breathing and an HVLP Air Supply

I only need to paint

Don't Forget Lens Protectors

Choose a system with enough hose length to locate the air supply pump in a fresh air location and have enough hose to move around your work area.

This system is not intended to purify contaminated air!

Hobbyair & Citation Systems

are not intended for any breathing environment immediately dangerous to life and health

Understanding HVLP....

HVLP technology is the fastest growing market segment in the spray equipment industry. Not only is it a superior method of spraying because of the increased efficiency it provides, but it also offers the painter more control of the spraying operation. In addition to that, HVLP is a much more environmentally friendly method of spraying because of the reduction of emissions. You will quickly realize that HVLP is the only viable choice when selecting spray equipment.

What are the advantages of turbine HVLP spraying over conventional paint spraying?

- 85% transfer efficiency which means **about 50% paint savings**
- Moisture problems are virtually eliminated
- Portability
- Easy to learn—you'll be an expert in no time!
- Low overspray

Unit Shown With PPS System and Half Facemask

Why do I need A Supplied Air Respirator?

Today's paints are better than they ever have been. They are also more toxic than their predecessors.

Isocyanates are what make the paint hard and shiny. Unfortunately, it does the same thing to the inside of your lungs. When you paint without fresh air, you run the risk of debilitating illness or even death. We have heard too many stories of friends who are crippled or have died as a direct result of breathing fumes while enjoying their hobby or earning a living.

There is no substitute for fresh air!

Axis Sprayers Save Money and the Environment

Citation and Axis Systems Are Used by Professionals

So Easy to Learn!

Use Less Paint!!

Paint Like a Pro!!!

Choose the Best System for Your Application

Citation HVLP Paint Sprayer/Respirator System

The CITATION HVLP Paint Sprayer and Respirator System is available with three or four stage turbine power for paint spray applications.

A four stage sprayer will supply more pressure which will atomize paint for a finer finish.

The CITATION includes a supplied air respirator powered by a separate air pump in one cabinet. Fresh Breathing Air is mandatory when spraying any polyurethane, or two part materials which produce isocyanates.

The AXIS HVLP Paint Sprayer is available in three or four stage turbine power, which provides the power you need to atomize your material to a beautiful finish.

All of our HVLP sprayers include a standard professional quality HVLP spray gun made by Lex Aire or 3M/Accuspray for dependable finish results.

Axis HVLP Paint Sprayer

The MARKSMAN HVLP Paint Sprayer includes a powerful two stage turbine which is great for spraying materials such as:

Lacquer	Varnish
Stain	Enamel
Dope	and a variety of industrial products

The MARKSMAN is especially designed for, but certainly not limited to the woodwork refinishing and modeling market.

Marksman HVLP Paint Sprayer shown with 3M gun

****Please note systems may include a Lex Aire or 3M/Accuspray gun and may differ from picture. Spray guns are also available in bottom feed or gravity feed. Different prices apply.*

AIR TO BREATHE - AIR TO PAINT

THE VERY BEST OF BOTH WORLDS.....

AXIS AIR GROUP, INC., is the only company on planet Earth who offers a sprayer system like this! It was designed because of the need for a painter to have a quality HVLP sprayer system along with a fresh-air breathing device that would be readily available in order to breathe safely and comfortably while spraying toxic materials.

THE SECRET.....

The CITATION's acceptance into the market is not just its unique design, but the quality of its component parts. During the development stage every part of the CITATION system was scrutinized to be the very best available before it was added to the system!

WHY SHOULD YOU CHOOSE A CITATION?

The CITATION is actually made up of two completely separate high quality and proven products combined together into one integrated and portable system; an HVLP sprayer and a fresh air respirator. Absolutely no compromises of any kind are made to assure that the CITATION will provide professional results time after time.

To boost your confidence about getting a professional quality finish on your project, you will need to have a sprayer that you can have confidence in—

You need our CITATION HVLP SPRAY/RESPIRATOR SYSTEM—anything less just wouldn't measure up.

Citation 3

The CITATION 3 HVLP Sprayer has a high output three stage turbine which provides the power you need to atomize high viscosity materials. It comes standard with a professional series HVLP spray gun designed to give auto-finish results. Available with a one-man or two-man respirator. Systems come standard with bottom feed professional paint spray gun. Upgrade to a gravity feed gun.

110-120V VAC, 50/60HZ AMPS—15 (sprayer only)
110 CFM
PSI—5.5 (available in 240 volt)

The CITATION 3 and 4 are available with a one or two-man respirator. Breathe cool fresh air all day. Because the respirator is supplied by a completely separate pump, you need not switch on the paint sprayer when it is not needed.

You choose a half facemask, a full facemask or a painting hood available in two styles.

110-120V VAC, 50/60HZ (one man 1.6 Amps) (two man 7.2 Amps)
Available in 240 Volt

Citation 4

The CITATION 4 HVLP Sprayer provides four stage turbine power. The extra power of 7 psi will greatly reduce the particle size of the material being sprayed. Better atomization will equate to a finer finish. Recommended for today's more professional quality finishes. Available with a one-man or two-man respirator. Systems come standard with bottom feed Lex Aire or 3M/Accuspray professional paint spray gun. Upgrade to a gravity feed gun.

110-120V VAC, 50/60HZ AMPS—12.6 (sprayer only)
65 CFM PSI—7 (available in 240 volt)

3 & 4

AXIS AND MARKSMAN HVLP PAINT SPRAYERS

TURBINE SPRAYERS - 2, 3 AND 4 STAGE

Three Stage

The AXIS SP 2003 HVLP Paint Sprayer is put together with a high output three stage turbine which provides the power you need to atomize high viscosity materials. It comes standard with a professional series HVLP spray gun designed to give automotive quality finish results.

20' Hose
120 Volt, 12.4 Amps
Output: 110 CFM, 5.5 PSI

Four Stage

The AXIS SP 2004 HVLP Paint Sprayer provides four stage turbine power. The extra power of 7 psi will greatly reduce the particle size of the material being sprayed. Better atomization will equate to a finer finish. Recommended for applications where only the finest finish will do.

40' Hose
4' Whip Hose
110-120v VAC, 50/60HZ
12.6 Amps 7 PSI 65 CFM

The MARKSMAN HVLP Paint Sprayer is a small yet powerful spray system that was designed for work on projects that require the use of materials that atomize quite easily. Lacquer, Varnish, Dope, Latex and household products are examples of these.

The MARKSMAN HVLP Paint Sprayer is widely used in professional woodworking shops and modelers who benefit from the portability and reliability of this spray system.

20' Hose
110-120v VAC, 50/60HZ
7.2 Amps 3 PSI
Available in 240 Volt

PAINT SPRAY GUNS

Axis Air Group, Inc. offers our new A-Gun and Lex aire lines of paint spray guns. We truly have chosen the BEST spray guns on the market.

Why? We don't like to have to solve spray gun problems!

You benefit because you now have two sources of support - Axis and the gun manufacturer.

HOW TO CHOOSE A SPRAY GUN

We are often asked questions like, 'Which spray gun is better?' and 'Which is better the bottom feed or gravity feed?'

It all comes down to personal preference. First, you need to know the A-Gun and Lex Aire guns provide excellent finished spray quality. Second, you need to consider where you want the paint cup. You may feel like you prefer that the paint cup on the top or on the bottom. If you are going to work in a tight space, this might influence your decision.

A bottom feed gun will hold a generous quart of paint and the paint cup is flat which enables you to set the gun down on any work table.

When you choose a gravity feed spray gun, you have the advantage of gravity. This means that you can use all of the paint in the paint cup. Of course, this means that you will need to utilize the included gun mount and will not be able to set the gun on the table.

HOW TO CHOOSE A NEEDLE/NOZZLE SET UP

If there is one thing we can tell you about choosing a needle/nozzle set-up of your spray gun is that there are no hard and fast rules. You should refer to the chart for each spray gun for a great suggested guideline.

After that, you may choose to make adjustments due to:

- | | | |
|---------------------------|---|---|
| The way you mix the paint | ▪ | Heavier viscosity requires a larger opening to flow through |
| Your environment | ▪ | Humidity may have an influence on the way paint flows |
| Speed of Application | ▪ | A larger opening will cause the paint to flow faster. Remember that, generally speaking, when the opening is larger, the droplets will be larger. At some point, larger droplets will cause an uneven finish. |

As a general rule of thumb, you will want to choose the smallest needle/nozzle size.

This will give you the finest atomization which will equate to the finest possible finish.

**To adjust the speed of application
Change the recommended nozzle size by one at a time**

Smaller Nozzles----->>>> Slower

Larger Nozzles----->>>> Faster

**To Adjust the degree of fine finish, change the size of the air cap
Smaller Air Caps----->>>> Finer Finishes**

The LexAire line of spray guns features an all metal gun body. This gun has been an old standby for us since 1995. We have many thousands of them out in the marketplace and they continue to perform as we rigorous use yet today.

* Stainless Steel & Chrome fluid passages are compatible with all waterborne and solvent based coatings.

* 98% Metal construction

* Stainless Steel Needles & Nozzles. Long Lasting for dependable service.

Available in bottom feed and gravity feed versions

Works well with 3M PPS cup system

* **MADE IN USA**

3M PPS PAINT PREPARATION SYSTEM

Spend Your Time
Spraying

Not Cleaning!

Finally an innovative paint cup system that:

*Saves time,
Saves money, and
Reduces your exposure to harmful chemicals*

Combine the 3M PPS Cup system with the patented Citation HVLP Paint Sprayer and Respirator system and you have the most innovative and efficient system on the market today.

The clear cup is used for mixing, measuring, straining and spraying. When you are done painting, easily remove the lid and liner and simply dispose of it following your local regulations.

The liner collapses as you spray eliminating the wasted paint left in a traditional cup. There is no pick-up tube which allows you to spray at any angle.

Add the 3M PPS System to your Citation or Axis system. We will send you a pressurized bottom feed cup, gun adaptor, mixing ratio guide and 25 large lids and liners.

The 3M PPS System is available for all types of paint spray guns. Update your spray gun today by referring to our guide for your correct set-up.

No Pick-Up tube - Spray at any angle

Less wasted paint

Up to 70% savings of cleaning solvent

Mix and spray in the same cup

Closed system allows you to spray at any angle

Less operator exposure to solvents and reduction in VOCs

MASK AND HOOD OPTIONS

HALF FACEMASK ASSEMBLY

Comfortable neoprene half facemask with durable strap assembly provides maximum seal with a wide sealing edge that fits securely against the face. You will find that this mask is a pleasure to wear.

Comfortable . . . Secure fit . . . Long Lasting

FULL FACEMASK ASSEMBLY

The full facemask assembly provides both breathing and eye protection when isocyanates or other eye irritant materials are present.

Must be used with a Hobbyair, Pro Air or Citation Respirator system

If you wear glasses, you will need a spectacle kit.

This installs in the mask after you have lenses installed by
(spectacle kit not included) your optometrist.

AIR SUPPLIED PAINTING HOOD ASSEMBLY

The Air Supplied Tyvek Painting Hood is durable and provides full protection to your face, hair and neck. The Large 16"x 6 1/4" viewing area and ratcheting headband provide for a secure fit.

When used with any Hobbyair or Citation System, it will supply cool fresh air to the hood, which circulates and exits around the neck.

Don't forget Hood Lens Protectors (Stock #13011)

PULLOVER PAINTING HOOD ASSEMBLY

Durable full head protection designed to be worn over any Axis Air Group, Inc. half facemask air supplied respirator system. Large 16" x 6 1/4" viewing area. Air pump supplied cool fresh air which circulates around the hood and exits around the neck.

Don't forget Hood Lens Protectors (Stock #13011)

Half facemask Pictured with Pullover Painting Hood
(half facemask not included)

What You're Saying.....

At Axis Air Group, Inc., we often attend shows and conventions to sell our products. Our greatest reward is talking with our present customers. Countless times during a show people will stop in just to say, "Hey, bought one, love it! Best money I've ever spent." In fact, our customers are always anxious to share their experiences with others. We step back and let them do the selling. Here's what they're saying:

**"The only problem is that all our friends want to borrow it..."*

**"Great investment, and it works as advertised!"*

**"I painted my airplane, and then I painted my house..."*

** "I never painted before—Look at what I did (pictures roll down)..."*

**"Where were you twenty years ago before I developed lung problems?"*

**"I couldn't believe the paint savings..."*

**"Best toy I've ever bought..."*

***Geez, I must have bought my HVLP Turbine system from you close to 12 years ago, maybe more. I race sports cars and the system has saved me at least \$15,000.00 during that time. Some of the guys I race with will spend \$4,000.00 to have their car painted during the off season.*

I crash way too often to pay someone else to keep my car looking fresh.....

Tom, Powhatan, VA

The Axis unit did a good job so far. Take a look at my website for results.
Ad, Holland

We have done our best to provide an accurate pricelist of our products.
We reserve the right to correct any errors. Thank you for your understanding.

#220V

Protect Your Investment

Be sure to add Lens Protectors to Full Facemask and Hoods

**Be sure to choose a system with plenty of hose to locate
the air pump in fresh air.**

***Hobbyair and Citation Respirators are NOT designed to be located
in the work environment.***

***Place the pump in fresh air and the system will delivery plenty of clean air to
your mask to make your job more enjoyable and safe.***

***Be sure to choose a hood or full facemask if your eyes need to be in fresh air.
Please check the label of the product or paint you are using for instruction.***
